

**IN THE SPECIFICATION**

1. Please amend paragraph [0015] as follows:

[0015] As telephone circuits also ~~utilize~~ utilize ICs, prior balanced circuits implemented by induction coils and condensers have been replaced by one LSI. In addition, since microprocessors and high capacity memory elements have been developed and LCDs (Liquid Crystal Displays) and LEDs (Light Emitting Diodes) have been cheaply supplied, a number display function of a clock or dial, as well as other similar functions, can be included in the telephone.
